

# Introduction to Clearvoice

## A fresh new approach!

### A new consultancy

#### Who are we...

Clearvoice are a unique consultancy aimed at advising businesses on the best use of technology to achieve maximum profitability.

With over twenty years experience in both business management and technology sales, we are perfectly positioned to make recommendations from experience.

#### How we work...

If like us, you're passionate about your business, anyone making suggestions about changing the way you work will be greeted with a little scepticism!

With this in mind, we know that every step of the way, we need to justify our actions and recommendations.

We provide detailed analyses of existing operations and costs, which helps everyone understand our logical approach to change.

Our objective is to increase profitability, therefore if your technology is NOT making you money, then it must be called furniture!

#### What does it mean for a business...

We want to help our clients make money with our ideas not just our products. We will:

- Find areas of cost savings first in order to pave the way for future investment.
- Act as a non-executive partner viewing your business as we would our own.
- Apply a logical, business intelligent approach to all aspects of consultancy.
- Present long term objectives based upon achievable results.
- Provide a road map for change as some suggestions may be dependant on another area first.
- Help your business create as much profit as possible.
- Not recommend unnecessary solutions or products.
- Provide a detailed Return On Investment analysis on all recommendations.

Our business experience enables us to understand the relationship between departments and therefore the impact any changes may have on other areas of your business.

We understand the typical pit-falls that can be associated with the implementation of new systems. We ensure this is dramatically minimised by project managing installations from start to finish.

And, so you can be completely reassured, we practice what we preach and use all of the technologies we recommend.
